HPSEC: High Performance Secure Extreme Computing

The HPSEC (High Performance Secure Extreme Computing) Session seeks presentations on new advances in the areas of design methodology, metrics and requirements, reference architecture, and technologies. A tutorial on a systematic approach of co-designing functionality and security into mission-critical computing systems will be offered ahead of technical sessions. The HPSEC Session will serve as a follow-on for the community to learn about and discuss state-of-the-arts technologies.
